

Daily Safety Inspection Form

Project: _____

Report Date: _____

Day: _____

Weather: _____

Attached Pages: Accident Report Incident Report Safety Violation

Platform/Scaffold/Engineered Platform & Shield Systems (OSHA 1926 Subpart L)	Yes	No	Platform Repairs Performed
Is the platform/scaffold/engineered system fully decked, secured, and free of loose or missing components?			
Is platform deflection (sag) within allowable limits per approved plans?			
Are all anchors, outriggers, and chokers properly installed, secured, and not overloaded?			
Are fall protection systems in place, including guardrails or 100% tie-off, with properly rated anchor points (5,000 lbs or engineered) and appropriate lanyards/SRLs in use?			
Are all rigging hoists and braking systems operational?			
Has a functionality check been completed on all equipment prior to use?			
Is safe access provided to all platforms/scaffolds/engineered systems?			
Is the drop zone established and controlled?			
Are wind and weather conditions verified to be within allowable limits for work?			Wind Speed/Direction:
Are approved plans for the platform/scaffold/engineered system available on site?			
Has a competent person inspection been completed, and is the system approved for use?			
Blast and Paint (Per OSHA 1926.57, 1910.107/AMPP/SSPC Guide 6&8)	Yes	No	Comments
Are blast hoods and required PPE in use and in serviceable condition?			
Are all hoses, couplings, whip checks, and fittings properly secured and in good condition?			
Are deadman controls installed on all blast hoses and functioning properly?			
Are spray guns equipped with required safety devices (e.g., tip guards/knuckle guards), and are safety locks functional?			
Are required filters (organic vapor and particulate) inspected and within their service life?			
Are VOC and LEL levels within specified limits?			Specification Limit:
Is the air purifying system identified, and are filter change dates documented?			
Is a CO monitor present, calibrated, and functioning properly?			
Is all required monitoring equipment within calibration and verified operational (bump tested) prior to use?			
Decontamination Area (OSHA 1926.62 (Lead Standard))	Yes	No	Comments
Is a decontamination area/trailer present, accessible, and maintained in a clean and functional condition?			
Are employees utilizing handwashing stations prior to breaks?			
Does the decontamination trailer have required supplies (soap, water, towels, and clean work clothing)?			
Are employees exposed above the PEL utilizing shower facilities at the end of the work shift?			
Is contaminated (dirty) clothing handled, stored, and disposed of in accordance with project requirements?			
Are street clothes stored separately from contaminated work areas (clean side of decontamination area)?			
Are respirators properly maintained, cleaned, and stored?			
Waste Area (EPA 40 CFR 262/OSHA 1926.65)	Yes	No	Comments
Is the hazardous waste storage area secure and waste properly stored?			
Is wastewater and paint waste properly contained and stored?			
Has any hazardous waste exceeded allowable on-site storage time limits?			Specified days allowed:
Was the hazardous waste storage area inspected for cleanliness?			
Was any hazardous waste shipped off-site on this date?			

Work Area (OSHA 1926.20, 1926.21)	Yes	No	Comments		
Is the restricted work area properly segregated with required barriers, caution tape, and signage?					
Are employees and authorized personnel within restricted areas utilizing required PPE?					
Is the work area free of visible spills or dust accumulation at the end of work inspection?					
Are tools tethered where required?					
Are extension cords and electrical tools free of damage (no exposed wires or splices), and are GFCIs in use where required?					
Are work area walkways maintained free of debris and tripping hazards?					
Are any pre-existing conditions observed that require documentation? (If yes, document and photograph.)					
Are any other trades or operations working near the work area?					
Life Safety	Yes	No	Comments		
Is required safety equipment (inside and outside containment) readily available and functional?					
Are first aid kits, fire extinguishers, eye wash and emergency equipment present and readily accessible?					
Are all required project plans (e.g., safety/work plans, waste management, rescue plans) available on site and implemented?					
Are independent lifelines and rigging ropes in use, within rated capacity, and in good condition?					
Was a daily toolbox talk conducted with crew attendance?			If yes Topic:		
Were any incidents or accidents reported on this date?					
Were any verbal safety warnings issued on this date?					
Testing (OSHA 1926.62/AMPP/SSPC QP Standards)	Yes	No	Comments		
Have all workers received medical clearance to wear a respirator and work with lead when applicable (including blood testing, respirator clearance and fit testing)?					
Have all workers received annual lead training?					
Was any monitoring performed today (e.g., air, wipe, water, soil, waste)?			Chain of Custody (if applicable):		
Containment (OSHA 1926.57/AMPP/SSPC Guide 6 (Containment))	Yes	No	Comments		
Is the containment system intact and functioning in accordance with approved plans (are joints sealed? openings closed? floor covering in place? make-up air inlets and airlock access points operational)?					
Were dust collectors and vacuum equipment operational throughout blasting activities?					
Was adequate airflow/ventilation maintained throughout blasting operations?					
Was negative pressure maintained within the containment?			Visual/Magnehelic: Reading(if applicable):		
Were airflow checks performed as required?			Method (e.g., Velometer): Airflow Readings:		
Was a final cleanup inspection of the containment performed?			Was the containment cleaned per spec?		
Visible Emissions	Locations		Time	Observation Period	Emission Time
